Research Interests

My research aims to create robust, safe, and intelligent robots systems that can operate reliably in the real world. I focus on the intersection of loco-manipulation, robot safety, whole-body control, and perception-enabled control.

Education

California Institute of Technology

Ph.D. Candidate, Mechanical Engineering (Robotics, Controls and Dynamics)

Pasadena, CA

Sept 2022 – Present

California Institute of Technology

M.S. Mechanical Engineering (along the way)

Pasadena, CA

June 2024

University of California, Berkeley

B.S. Electrical Engineering and Computer Sciences

Berkeley, CA

May 2022

Professional Experience

California Institute of Technology

Ph.D. Candidate

Pasadena, CA

2022 – Current

- Built full-stack pipeline of humanoid robot whole-body task-space controller, enabling the Unitree G1 to complete natural language and vision driven tasks in the real world with no task data collection.
- Constructed social-semantic safety frameworks for general mobile robot platforms, validated on the Unitree G1 and Go2.
- Developed pipelines for data collection, finetuning, and deployment of VLA models for Franka Emika.
- Designed reinforcement learning and hardware deployment pipeline for humanoid robots, enabling real-world experiments.
- Developed methods to enforce safety in learned control and planning policies, improving robustness of autonomous systems.
- Created push-recovery and uncertainty-aware locomotion frameworks, validated on humanoid platforms.

University of California, Berkeley

Student Research Assistant

Berkeley, CA

2019 – 2022

- Conducted robotics research on locomotion, perception, and multi-robot collaboration, with deployments on Unitree A1 and MIT Mini Cheetah.
- Built multi-robot system frameworks integrating LiDAR and depth sensing for collaborative load-moving tasks.
- Developed vision-based navigation and obstacle detection stacks in ROS, enabling autonomous quadrupedal navigation.
- Applied reinforcement learning (PPO) and Bayesian optimization for locomotion control, improving stability and adaptability.

Samsara Inc.

Software Engineering Intern

San Francisco, CA

2021

- Delivered production features in a 4-person engineering team, contributing to fleet management products.
- Built machine learning benchmarking tools to compare models at scale, improving workflow efficiency for ML engineers.
- Leveraged C++ and Go for backend development and performance optimization.

Awards & Honors

2025: Best Oral Presentation Finalist, International Conference on Humanoid Robots (Humanoids)

2022: Arthur M. Hopkin Award – University of California, Berkeley

2021: Best Service Robotics Paper Finalist, International Conference on Robotics and Automation (ICRA)

Invited Talks

2025: *From Performance to Safety: Bringing Robots Into the Real World*, Seminar of Prof. Xiaobin Xiong, University of Wisconsin–Madison; Seminar of Prof. Adam Wierman, California Institute of Technology

Academic Service

Reviewer: IEEE Transactions on Industrial Electronics (TIE), IEEE Robotics and Automation Letters (RA-L), IEEE International Conference on Robotics and Automation (ICRA), IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS) and Frontiers in Robotics and AI.

Outreach & Community Service

Pioneers in Engineering PiSens

Project Manager

Led team to develop sensor kits for low-cost robot competitions; organized annual competitions for underrepresented high school students in the Bay Area.

UC Berkeley

May 2019 – May 2020
